	<u>February</u>	<u>March</u>	<u>April</u>	<u>May</u>
SEB Neusiedl	272	235	230	230
SEB Muehlberg	670	691	780	780
SEB Aderklaa	unknown	620	800	857
SEB Matzen	{ 7,500	{ 7,500	3,500	3,530
SEB Bockfliess			3,650	3,700

2. On or about 21 May 1954, Technsab director Tarutin (fnu) stated that SMV plans to start again a big program of test drilling at SEB Aderklaa in spring 1955. For this purpose, the Carrotage section received 55 tons of dynamite from the firm Dynamit Nobel A.G., Heumarkt 10, Vienna III. Another 25 tons of dynamite are to be delivered to Carrotage by fall 1954. However, three men who had been terminated at the Neusiedl Central Warehouse and then assigned to SEB Aderklaa, were only instructed to clean drilling equipment stored at SEB Aderklaa, and then winterize it again. By the end of May, Austrian officials at SEB Aderklaa alleged that drilling plans had been cancelled again.
3. Up until 21 May 1954, reduction of personnel and statements by Soviet SMV officials tended to indicate that all production and test drilling at SMV had been discontinued. Between 1 February and 31 April 1954, the following drilling rigs were in operation:

Bohrbetrieb Prottes	4	-	-		
Van Sickle, at Blattwald				3	25X1

1 [] Comment. []
[] ings would be made in Austria since new producing fields
had been d []

2 [] Comment. Because of the extreme cold weather in February, the water rising through the pipes constantly froze and only those rigs which were electrically powered could stay in operation.

3 [] Comment. The geological test drilling at Deutsch Wagram was to determine whether a connection exists between the producing fieldsoof SEB Matzen and SEB Aderklaa. The Soviets were also trying to find a connection between the producing fields of Aderklaa and those of Hungary.
